Observation Objective

UVS real-time Io Eclipse observation. Obtain UVS N-Channel data (2800-4300 Å) while Io is being eclipsed by Jupiter. Data will be used to characterize the lower atmospheric UV airglow emissions of Io while in eclipse.

E6IUIODARK01- = Io eclipse measurement. 1 scan-platform drift across Io in real-time (15 RIM 3-sigma drift rate) using the UVS 10 bps RTS rate. The drift will include 15 RIMs HV On / 15 RIM HV Off for PWS time sharing.

UVS Configuration = N-Channel Full Scans

Observation Objective		
	UVS real-time Io Eclipse observation. Characterize the change in the lower atmospheric UV airglow emissions as Io exits eclipse. Determine if the source of the change is due to: 1) a change in the lower atmospheric composition as it cools (ie. SO2 condensation); or 2) a potential change in the excitation mechanism if solar photoexcitation is dominant over particle impact.	
	E6IUIECLPS03- = Io eclipse before egress measurement. 1 scan-platform drift across Io in real-time (15 RIM 3-sigma drift rate) just prior to the satellite leaving Jupiter's eclipse using the UVS 10bps RTS rate. Only 1 drift will be done prior to eclipse ingress due to PWS time sharing. Each drift will include 15 RIMs HV On / 15 RIMs HV Off for PWS time sharing. The corresponding ingress measurements (E6IUIECLPS01- & 02-) were deleted due to time conflicts with the E6 AWG Feature Track observations.
