Profile:

Dr. Sebastian Schmidt works as a Research Scientist II at the Laboratory for Atmospheric and Space Physics at the University of Colorado, Boulder. His research is focused on atmospheric remote sensing and energy budget studies from aircraft, from the ground, and from space. He specializes in spectrally resolved measurements of shortwave radiation, 1D and 3D radiative transfer calculations, and has participated in numerous cloud and aerosol field experiments. Currently, he is working on joint spectral retrieval algorithms for cloud-aerosol layers, ocean color and trace-gas properties, and on new hardware for airborne irradiance measurements. He has taught classes in radiative transfer and is co-advisor for four graduate students at CU. He collaborates with numerous atmospheric scientists across the community and is PI on four projects that involve field experiments as well as instrument and algorithm development.
