# Version 8 Updates

- ESP updates: fixed quad diode fractional irradiance
- New Level 4 Lines data product in the works
- Updates to emission lines added in Level 2/2B and Level 3
- Improvements to the 17.1 nm region of the Level 2/2B & Level 3 spectra
- MEGS-B: particle filtering & dark corrections
- MEGS-B long term degradation

# Lines reported from each channel

- Additional lines added to the Level 2/2b and Level 3 data products
- Where there is crossover, lines will be reported from each channel; e.g. the 17.1 nm line is measured by both MEGS-A1 and MEGS-A2 and will be reported for each
- Backwards compatible data structures include everything from version 7 data products

# MEGS-A1 vs. MEGS-A2

# Improvements in 17.1 nm region of EVE spectrum

Version 8 better represents the 17.1 nm region.

# MEGS-B: improved particle filtering

- MEGS-B integration time changed from 10-seconds to 60-seconds in 2018
- Leads to more particle strikes in images
- The process for filtering becomes more important to ensure we remove particle strikes
