# Panel 1: Solar Physics Analysis and Results Using SDO/EVE

- Panel Questions:
  - What new techniques or different observations are desired to combine with solar EUV spectral irradiance observations to address some of the outstanding solar physics questions?
  - What spectral range and resolution are needed for future solar spectral irradiance measurements to optimize solar physics studies?
- Panelists:
  - Amir Caspi, Southwest Research Institute (SwRI), Boulder
  - Ryan Milligan, Queen's University at Belfast (QUB), Ireland
  - Barbara Thompson, NASA Goddard Space Flight Center (GSFC), Greenbelt
- Panel Format:
  - Panelists make opening remarks on the Panel Questions
  - Q&A and Discussion with Panelists and Workshop Participants
  - Moderator is Tom Woods
