Draft rollout notice/instruction (04/06/23)

The Magnetospheric Multiscale (MMS) mission announces public rollout of Digital Object Identifiers (DOI) for the mission's data products. The Mission requests users of its data products to cite a data set by its DOI in the same manner as citing a journal paper in a publication. Data sets from different spacecraft have their respective DOIs.

The root directory to locate the DOI for each of the MMS data sets is

<https://hpde.io/NASA/NumericalData/MMS/>

As an example, to cite the burst FGM data set, a user is to follow the directory tree to the landing page to find the data set's DOI

<https://doi.org/10.48322/pj0n-m695>

A the top of the page, just below the page title, is the suggested bibliography entry for the citation

"

Russell, C.T., Magnes, W., Wei, H., Bromund, K.R., Plaschke, F., Fischer, D., Strangeway, R.J., Leinweber, H.K., Eichelberger, H.U., Huang, B., Le, G., and Burch, J.L. (2022). MMS 1 Flux Gate Magnetometer (FGM) DC Magnetic Field, Level 2 (L2), Burst Mode, 128 Sample/s, v4/5 Data [Data set]. NASA Space Physics Data Facility. <https://doi.org/10.48322/pj0n-m695>.

"

If the fast survey FGM data set is referenced, the DOI to use is

<https://doi.org/10.48322/mxbx-r466>

The usage of a DOI link for each data set is analogous to a paper's DOI, for example,

<https://doi.org/10.1029/2018JA025245>

One key feature of the MMS data product DOI pages is that they are live and will be updated when necessary.

.....
