

# How to Connect to the LASP VPN

## Requirements

1. The Cisco AnyConnect application installed on your computer.

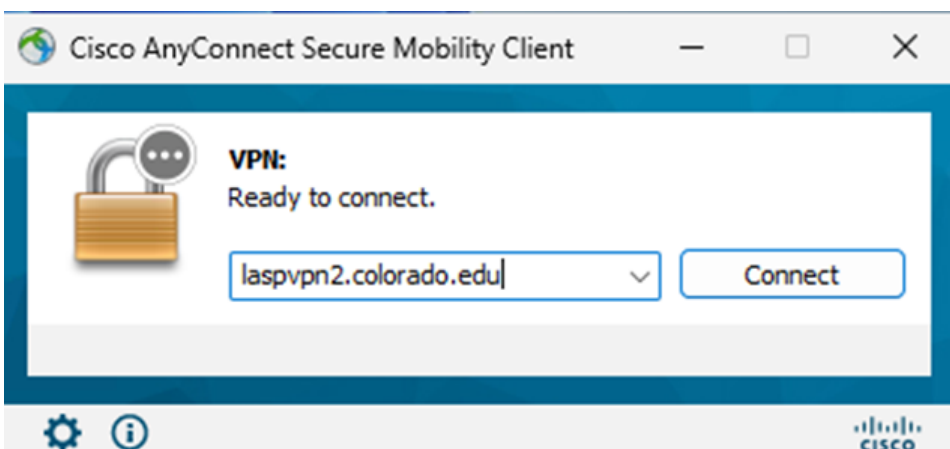

If you are using a LASP computer it will already have the Cisco AnyConnect application installed.

Otherwise, see [How to download the LASP VPN application](#).

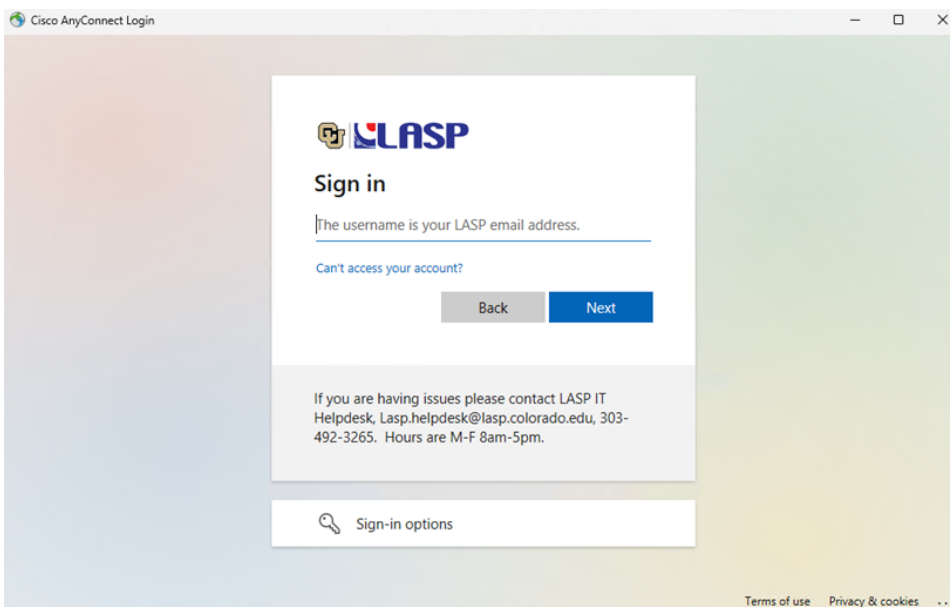

2. You will need to setup your O365 MFA, if its not already configured. See [How to check or setup LASP O365 MFA](#) for instructions.

## Step-by-Step Instructions

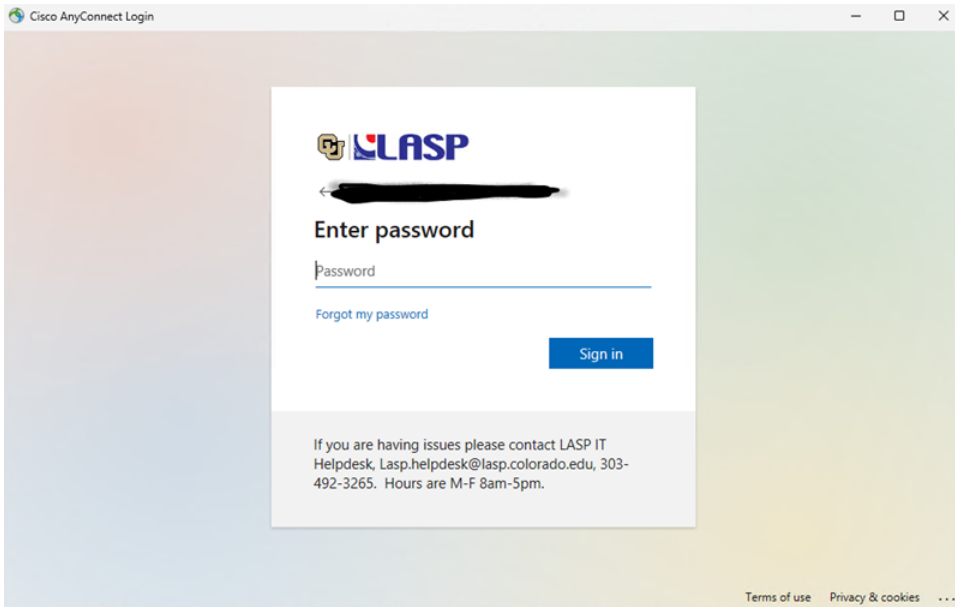

1. Open the Cisco AnyConnect application.
2. Verify the dropdown menu shows [lasvpn2.colorado.edu](https://lasvpn2.colorado.edu)

3. Once you select "Connect" it will ask for your username. Make sure to put in your LASP email address.

4. Once you put in your email address and select "Next" it will ask you for your password. Put in your LASP email address password.

The screenshot shows a web browser window titled "Cisco AnyConnect Login". The main content area has a light green background. In the center, there is a white rectangular box containing the LASP logo (a blue shield with a white 'L' and the letters "LASP" in blue) and a blacked-out email address. Below the email address, the text "Enter password" is displayed. Underneath, there is a password input field with the placeholder text "Password". To the left of the input field, there is a link that says "Forgot my password". To the right of the input field, there is a blue button with the text "Sign in". At the bottom of the white box, there is a grey rectangular area containing the text: "If you are having issues please contact LASP IT Helpdesk, Lasp.helpdesk@lasp.colorado.edu, 303-492-3265. Hours are M-F 8am-5pm." At the bottom right of the browser window, there are links for "Terms of use", "Privacy & cookies", and a three-dot menu icon.

5. Depending upon your MFA options you might get asked to use the MS Authentication app, a Text code, phone call, or hard token pin.
