

A Concept for the Measurement of the Earth Radiation Imbalance

Wolfgang Finsterle [wolfgang@pmodwrc.ch], Margit Haberreiter, Benjamin Walter, Alberto Remesal Oliva, Silvio Koller, and Dany Pfiffner; Physikalisch-Meteorologisches Observatorium / World Radiation Center (PMOD/WRC), Davos Dorf, Switzerland

The concept study will be presented for an adapted version of the Davos Digital Absolute Radiometer (DARA) to observe the reflected short-wave and emitted long-wave radiation from a nadir-pointing EO satellite, such as the proposed EAGER mission. Together with a sun-pointing DARA the Earth's radiation imbalance will be determined.
