New Solar EUV Irradiance Measurements from GOES-16

Andrew Jones [Andrew.Jones@lasp.colorado.edu], Laboratory for Atmospheric and Space Physics (LASP), University of Colorado, Boulder, CO, USA

The space weather suite of instruments on the new series of GOES-R satellites includes a EUV spectrometer. These spectrometers make line-irradiance measurements, that form the input to an operational proxy-model that produces an EUV spectrum. Rather than talking about the model, I will concentration on the irradiance measurements that the GOES-16 / Extreme Ultraviolet and X-ray Irradiance Sensors (EXIS) instrument is taking.
