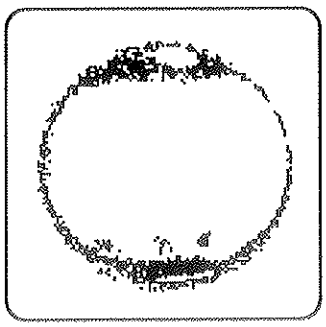
Observation Objective



19EUSURFAC01: We will observe Europa's surface at various longitudes and phase angles with TMC on to get good signal using F/F full scans. These observations will complement the nominal mission observations to derive phase curves for several locations on Europa, to understand how exogenic processes affect the surface scattering. We are interested in obtaining a high signal-to-noise at the shorter wavelengths (< 2200 Å) to see if Europa's surface has any distinctive features in this region. Observe Europa's surface for ~1 hour.
Sunlight, 180° longitude, 85° phase

Rj = 16.7
UVS configuration: full F/G scan

MBTG = 17712 bits/flush * 1 flush = 0.018

Observation Objective

19EUATMOS_01: Europa atmosphere observation. We will look for Europa atmospheric emissions (oxygen, hydrogen and sulfur, as well as other possibilities). We will also monitor the tenuous atmosphere for possible outgassing episodes. Observe Europa's atmosphere for ~4 1/2 hours. Sunlight, 140° longitude.
First 3 hours, stare at Europa. 1216-1302 1 1/2 hrs
1356-1356 1 1/2 hrs
Third 1 hour: -8 radii from Europa 1356 background
Fourth 1/2 hour: -8 radii from Europa Lya background

Rj = 14.9
UVS configuration: 1356-1479 Å 22 step G/G mini-scan
MBTG = 17712 bits/flush * 5 flushes = 0.089
